

PROJECT KHUFRA AI 2026

Our Blueprint for Success

From: Ujjwal Adhikari (Canada)

To: Anjing Khadka (Japan)

Date: January 14, 2026

Hey Anjing,

This is our complete roadmap for building Khufra AI together. I've laid out everything - the tech stack I'll be using, the strategies you'll be contributing, our timeline, and how we'll split the work. Let's build something remarkable.

Our Vision: We're combining your trading expertise with my AI and automation skills to create an intelligent system that trades 24/7 without emotions, executed with mathematical precision.

1. HOW WE'LL STAY CONNECTED

I'm Recommending: ****Discord****

Here's why I think Discord is perfect for us:

- [YES] Completely FREE - no subscription needed
- [YES] Works seamlessly between Canada and Japan
- [YES] Crystal clear voice/video calls with screen sharing
- [YES] I can organize everything into channels (strategy talks, code sharing, test results, daily performance)
- [YES] Easy file sharing and code snippets with syntax highlighting
- [YES] Works great on both mobile and desktop
- [YES] Private server just for us - nobody else
- [YES] I can set up bots to send us trading notifications

Backup: Telegram

- Let's exchange Telegram too for quick mobile pings
- 100% FREE

- Perfect when we need to reach each other fast

Here's What I'll Do:

1. I'll create our private Discord server
2. Set up channels: #general, #strategy-discussion, #code-sharing, #bot-testing, #daily-results, #resources
3. Send you the invite link
4. You just need to create an account and join
5. We'll exchange Telegram numbers for urgent stuff

2. WHAT WE'RE BUILDING TOGETHER

Our Bot - "Khufra AI":

Here's what I'll be coding for us:

- Real-time monitoring of geopolitical news and market sentiment (24/7)
- Automatic trade execution based on the strategies you'll teach me
- Zero emotional bias - pure mathematical decisions
- Smart adaptation to changing market conditions
- Target: 55-60% win rate for consistent profits

Our Philosophy:

You said it best - we can't predict the future, but we CAN move forward with mathematical certainty. That's exactly what I'm building into this system.

3. MY TECH STACK (All Free/Zero Cost)

What I'll Be Coding In:

- Python 3.11+** - This is my go-to language. Fast, reliable, perfect for trading bots.

Tools I'll Use:

- VS Code** - My code editor (FREE)

- Git & GitHub** - I'll set up our private repo (FREE)
- Python Libraries** I'll install (All FREE):
- ccxt - Connects to any crypto exchange
- pandas - For crunching trade data
- numpy - Mathematical calculations
- requests - API calls
- python-telegram-bot - Sending us notifications
- ta-lib or pandas-ta - Technical indicators
- anthropic - Claude AI integration (I have access)
- BeautifulSoup4 - Scraping news
- selenium - Automating TradingView
- schedule - Running tasks on schedule

Where I'll Host It:

- Google Cloud Platform** - I already have this set up
- FREE tier gives us \$300 credit for 90 days
- After that, only ~\$5-10/month for a basic VM
- Backup options:** Replit or Railway.app (both have FREE tiers)

AI/Analysis Tools:

- Claude API** - I have access through my subscription
- TradingView** - FREE tier works fine
- News APIs** (FREE tiers):
- NewsAPI.org (100 requests/day free)
- Alpha Vantage (500 requests/day free)

Trading Platforms:

- Bitget** - For live trading (you're already on this)
- Binance/Bybit** - Backups if needed
- Paper Trading** - FREE sandbox accounts for testing

4. OUR 14-WEEK JOURNEY

PHASE 1: Getting Everything Ready (Week 1-2)

What I'll Do:

- Set up our Discord server with all the channels we need
- Create our private GitHub repository and give you access
- Install all the Python libraries I'll be using
- Build the basic bot structure and organize the files
- Set up our Google Cloud VM or find a good free alternative
- Create the database structure for storing all our trades

What You'll Do:

- Share with me your 3-5 best trading strategies with clear entry/exit rules
- Show me examples of your past successful trades
- Tell me which technical indicators you trust most
- List your preferred trading pairs and timeframes
- Share your risk management rules (stop losses, position sizing)

Together:

- Let's have a 30-min Discord call daily to stay aligned
- We'll review and finalize all the strategy documentation
- Set our goals and define what success looks like

Deliverable: Solid foundation with strategies documented and basic bot structure ready

PHASE 2: News Monitoring System (Week 3-4)

What I'll Build:

- News scraping module that monitors key sources 24/7
- Claude AI integration for analyzing news sentiment
- Sentiment scoring system (positive/negative/neutral)
- Test how well news converts to trading signals
- Telegram alert system so we both get instant notifications

What You'll Do:

- Give me examples of news that moved markets before
- Tell me exactly what events to monitor (Fed meetings, regulations, China news, etc.)
- Test my sentiment scoring - tell me if it makes sense
- Give me feedback on signal quality

Deliverable: A system that alerts us both when important market-moving news drops

PHASE 3: TradingView Integration (Week 5-6)

What I'll Build:

- Connection between bot and your TradingView signals
- Signal validation logic (filtering out weak signals)
- Backtesting framework to test strategies on historical data
- Strategy filters based on your criteria

What You'll Do:

- Set up TradingView alerts for your key strategies
- Share any Pine Script indicators you use
- Test the signal accuracy with me
- Validate backtesting results - make sure they match reality

Deliverable: Bot receives your TradingView signals and validates them

PHASE 4: Exchange Integration (Week 7-8)

What I'll Build:

- Integration with Bitget API (or your preferred exchange)
- Order execution module (buy/sell automation)
- Error handling (what happens if connection drops)
- Position tracking system
- IMPORTANT:** Paper trading mode first - NO REAL MONEY yet!

What You'll Do:

- Set up your Bitget account and generate API keys
- Define position sizes and risk parameters
- Monitor our paper trading performance closely
- Give me feedback on execution logic

Deliverable: Bot can execute trades automatically (in paper trading mode only)

PHASE 5: AI Decision Engine (Week 9-10)

What I'll Build:

- Claude AI integration for analyzing each trade opportunity
- Decision-making logic that combines news + TradingView + your strategies
- Confidence scoring (how certain should we be before entering?)
- Multi-factor validation (checking multiple things before trading)

What You'll Do:

- Review my AI decision logic - does it make trading sense?
- Share your trading psychology with me
- Help me set confidence thresholds
- Validate that decisions match what you would do

Deliverable: AI brain that thinks through trades like you would

PHASE 6: Risk Management (Week 11-12)

What I'll Build:

- Automatic stop loss execution
- Position sizing calculator (based on your rules)
- Portfolio balance tracking in real-time
- Maximum drawdown limits (system stops if we lose too much)
- Emergency kill switch (stops everything instantly if needed)

What You'll Do:

- Define ALL risk parameters with me
- Set maximum loss limits you're comfortable with
- Test different risk scenarios with me
- Validate all protection mechanisms work

Deliverable: Bulletproof risk management - protecting our capital first

PHASE 7: Testing & Optimization (Week 13-14)

What We'll Both Do:

- Run extensive paper trading for 2 full weeks minimum
- Analyze every single trade together
- Optimize strategy parameters based on results
- Fix any bugs or edge cases I find
- Document everything we learn

Deliverable: Bot that's been battle-tested and ready for small real trades

PHASE 8: Going Live (Week 15+)

Our Strategy:

- Start with the SMALLEST position sizes possible (seriously, tiny amounts)
- I'll monitor every trade like a hawk, you will too
- Daily review calls on Discord - no exceptions

- Gradually increase size as we build confidence
- Document all results and learnings religiously

Deliverable: A profitable automated trading system that makes us money while we sleep

5. COST BREAKDOWN (Target: \$0/month)

Everything Free:

- Discord: \$0 (I'll set it up)
- Python & All Libraries: \$0
- VS Code: \$0
- GitHub: \$0 (private repos included now)
- Claude AI: \$0 (I already pay for this)
- TradingView Free: \$0 (enough for what we need)
- News APIs (free tiers): \$0
- Google Cloud (first 90 days): \$0 (I have free credits)

If We Need to Pay Later:

- Google Cloud after 90 days: \$5-10/month (we'll split 50/50)
- TradingView Pro (more alerts): \$15/month (optional, only if we really need it)
- Backup VPS hosting: \$5/month (optional backup)

Bottom Line: \$0-15/month maximum, split equally between us

6. WHO DOES WHAT

My Responsibilities (Technical Side):

What I'm Taking On:

- All the coding and development work
- Bot infrastructure and hosting setup
- Connecting all the APIs (exchanges, news, TradingView)
- Database management and data storage

- Troubleshooting any technical issues
- Integrating Claude AI for decision-making
- System monitoring and keeping everything running 24/7

My Time Commitment: 15-20 hours per week

Your Responsibilities (Trading Side):

What You're Taking On:

- Developing and sharing your trading strategies
- Market analysis and signal generation
- Validating trades and reviewing performance
- Defining all risk parameters
- Performance analysis and optimization
- Strategy refinement based on results
- Being our market expert and guide

Your Time Commitment: 10-15 hours per week

What We Do Together:

- Daily communication and status updates
- Strategy discussions and brainstorming
- Performance review sessions
- Making big decisions together
- Documenting what we learn

7. HOW WE'LL KNOW WE'RE WINNING

During Development (Phases 1-7):

- [YES] All systems working and talking to each other properly
- [YES] Paper trading showing 55%+ win rate consistently
- [YES] All risk controls functioning perfectly
- [YES] Zero critical bugs or system crashes
- [YES] Consistent performance over 2 solid weeks

When We Go Live (Phase 8+):

- [TARGET] **Win rate:** 55-60% minimum (we agreed on this)
- [TARGET] **Maximum drawdown:** Less than 10%
- [TARGET] **Risk/reward:** Minimum 1:2 (we make at least 2x what we risk)
- [TARGET] **Monthly return:** 5-15% (being conservative here)
- [TARGET] **System uptime:** 99%+ (almost always running)

8. OUR RISK MANAGEMENT RULES (Non-Negotiable)

Hard Limits We MUST Follow:

- Never risk more than 1-2% per trade (seriously, this is critical)
- Maximum 3 positions open at the same time
- Daily loss limit: 5% of portfolio (system stops if we hit this)
- Monthly loss limit: 15% of portfolio (we pause and reassess)
- Stop trading immediately if we hit 3 losses in a row (no revenge trading)

Emergency Protocols:

- I'll build a kill switch to stop everything instantly if needed
- Telegram alerts for both of us on all significant events
- We BOTH review the portfolio daily - no exceptions
- Weekly performance analysis is mandatory
- If something feels wrong, either of us can call time-out

9. HOW WE'LL STAY IN SYNC

Every Day:

- Quick Discord text updates if anything important happens in the markets
- We both respond to alerts and notifications

Three Times a Week:

- 30-minute Discord video call (let's keep these tight)
- Review recent trades and how they went
- Discuss any strategy tweaks we need
- I'll flag any technical issues

Once a Week:

- 1-hour deep dive session
- Analyze every single trade from the week
- Update our documentation
- Plan what we're focusing on next week

Whenever Needed:

- Emergency calls if something critical happens
- Quick Telegram messages for urgent stuff
- No question is stupid - let's overcommunicate rather than assume

10. HOW I'M ORGANIZING OUR CODE

Here's the folder structure I'll be using. Don't worry about the technical details - I just want you to know how it's organized:

```
project-khufra-ai/
├──
├── config/
│   ├── settings.py # All our settings in one place
│   ├── api_keys.py # API credentials (NEVER shared on GitHub)
│   └── strategies.json # Your trading strategies stored here
├──
├── modules/
│   ├── news_monitor.py # News scraping & analysis
│   ├── tradingview.py # TradingView signal handler
│   ├── exchange.py # Exchange API (Bitget, etc.)
│   ├── ai_engine.py # Claude AI integration
│   ├── risk_manager.py # Risk management brain
│   └── notifications.py # Telegram alerts to both of us
└──
```

```
■■■ data/
■ ■■■ trades.db # Database storing all our trades
■ ■■■ logs/ # Daily log files for debugging
■
■■■ tests/
■ ■■■ test_*.py # Tests I'll write for each module
■
■■■ docs/
■ ■■■ strategies.md # Your strategies documented
■ ■■■ api_reference.md # Technical API docs
■ ■■■ troubleshooting.md # Solutions to common issues
■
■■■ main.py # Main entry point - starts everything
■■■ requirements.txt # List of Python libraries needed
■■■ README.md # Project overview
■■■ .gitignore # Files we don't upload to GitHub
```

11. OUR GUIDING PRINCIPLES

How I'm Approaching the Code:

1. **Start Simple** - I'll build the basic version first, add complexity later. No overengineering.
2. **Test Everything** - Never skip testing, especially when real money's involved.
3. **Log Everything** - Detailed logs help me debug and help us both improve.
4. **Fail Safe** - If something breaks, the bot stops trading automatically.
5. **Version Control** - I'll commit code changes daily so we can always go back.

How We're Approaching Trading:

1. **Mathematical Edge** - We need a proven statistical advantage, not hope.
2. **Risk First** - Protecting our capital comes before chasing profit.
3. **Emotionless** - Once we set the rules, we let the bot execute without interference.
4. **Adaptive** - We'll adjust strategies based on what the data tells us.
5. **Disciplined** - We follow our own rules, every single time. No exceptions.

How We're Working Together:

1. **Clear Communication** - Let's overcommunicate rather than assume anything.
2. **Shared Success** - We win together or we learn together. No blame game.
3. **Complementary Skills** - You lead on trading, I lead on tech. We trust each other's domain.
4. **Continuous Learning** - Every trade, win or loss, teaches us something.
5. **Patient Growth** - We're building this slowly and scaling carefully. No rush.

12. CRITICAL REMINDERS (Read This Twice)

- [!] **START TINY:** I'm serious - we begin with the smallest position sizes you can imagine
- [!] **PAPER TRADE FIRST:** Minimum 2 weeks in paper trading before we touch real money. No shortcuts.
- [!] **ONLY RISK WHAT YOU CAN AFFORD TO LOSE:** This is entertainment money, not rent money.
- [!] **SEPARATE ACCOUNT:** Don't use your main trading funds. Keep Khufra AI separate.
- [!] **BACKUP EVERYTHING:** I'll backup the code, you backup your strategies. Everything gets backed up.
- [!] **STAY LEGAL:** Make sure this complies with regulations in both Canada and Japan
- [!] **DOCUMENT EVERYTHING:** We're keeping detailed records of every decision and every result

13. LET'S GET STARTED - THIS WEEK

What We Need to Do Immediately:

1. [YES] **Both of us:** Create Discord accounts (if you don't have one)
2. [YES] **Me:** I'll set up our private Discord server and send you the invite
3. [YES] **You:** Share 2-3 of your best trading strategies in detail (entry, exit, why they work)
4. [YES] **Me:** I'll set up our GitHub repository and give you access
5. [YES] **Both:** Let's schedule our first 30-min video call to align on Phase 1

Next Week (Week 2):

1. I start building the news monitoring module
2. You document all your strategies in our #strategy-discussion channel
3. We both set up paper trading accounts
4. We start our daily progress updates

Let's do this!

14. WHY WE'RE DOING THIS

"Alone we may go fast. Together we will go faster."

"We don't need to be right every time. We need to be systematic, disciplined, and mathematically sound."

"History teaches, but mathematics decides."

Listen, this isn't some get-rich-quick scheme. We're building a real system here - combining your trading brain with my technical skills. It's going to take work, patience, and discipline. But I truly believe that if we do this right, we're creating something that can generate consistent returns while we sleep.

You've got the trading knowledge and market feel. I've got the coding chops and AI integration. Together, we cover each other's blind spots.

Let's build something remarkable.

Ready when you are, partner.

- Ujjwal

Document Created By: Ujjwal Adhikari

Date: January 14, 2026

For: Anjing Khadka & Project Khufra AI

Next Review: After we complete Phase 1

APPENDIX: RESOURCES I RECOMMEND

If You Want to Learn More:

Python for Finance:

- [\[realpython.com/python-finance\]](https://realpython.com/python-finance)(https://realpython.com/python-finance) - Great intro if you're curious about the code

Trading APIs:

- CCXT Docs: [\[ccxt.readthedocs.io\]](https://ccxt.readthedocs.io)(https://ccxt.readthedocs.io) - What I'll use to connect to exchanges
- Claude AI Docs: [\[docs.anthropic.com\]](https://docs.anthropic.com)(https://docs.anthropic.com) - How I'm integrating AI

Trading Education:

- TradingView Pine Script:
[\[tradingview.com/pine-script-docs\]](https://www.tradingview.com/pine-script-docs)(https://www.tradingview.com/pine-script-docs)

Free Trading Education:

- Babypips: [\[babypips.com\]](https://babypips.com)(https://babypips.com) - Comprehensive free trading course
- TradingView's Education section - Charts and technical analysis

Communities Worth Checking Out:

- Reddit: r/algotrading - Other people building trading bots
- Discord: Algorithmic Trading communities (I can find good ones for us)
- GitHub: Open source trading bots for reference (I'll study these)

P.S. - If you have any questions about the technical stuff or want me to explain anything differently, just hit me up on Discord or Telegram. No question is too basic.
